

How to install "Ways To Success" Program from school network to individual computers

Run f:\wtsnetwork\client install\grade 1\client setup.exe

I selected minimal install for both installs. For teachers machines minimal teacher management and student files and for student machines minimal install student files only (I think the last two options in the list when it asks).

If you run this at any computer it will install those items. It also looks like there is setup required for both teacher and students in the system. Must run the Teacher management application to do so. Instructions are in the book you gave me. I will leave it in Miss Tuckers room and maybe she will do it.
